

MERLYN ELECTRONICS SMATEX DIVISION

NOVEMBER 2007

MERLYN ELECTRONICS HAS OVER 20 YEARS EXPERIENCE AS A MAJOR MANUFACTURER AND SUPPLIER OF ELECTRONICS TO THE RAIL INDUSTRY.

50 YEARS COMBINED EXPERIENCE

This position was further strengthened in the Spring of 2007 with a strategic amalgamation with respected engineering manufacturer Smatex Ltd. The partnership brings together a knowledge bank of over five decades of experience supplying bespoke electronics to the transport industry in the UK and around the world.

Smatex MD David Moss explained "The amalgamation with Merlyn made perfect sense and we are both delighted with the fruits that it has begun to bear. The Merlyn-Smatex partnership brings together a unique skill base that we have used to demonstrate our value in winning new contracts.

Jonathan Eagle, MD of Merlyn Electronics added "The ability to attract high profile clients is testament to the importance of maintaining a base of engineering expertise in the UK. Together with our partners in Smatex we reinforce our commitment to all our transport industry clients to ensure the highest standards of performance in design and manufacturing service now and in the future."

BESPOKE DESIGNS COMPLETED

The expansion of the business has enabled Merlyn Electronics to complete a major contract to supply bespoke lighting controls for driver's cabs on the rail network. The initial design and prototype was produced from a design brief in only 3 weeks and benefited greatly from David Moss of Smatex's design input.

TYPE TESTS PASSED

The expanded Merlyn Electronics has also deigned a LED based lamp replacement unit which passed all the railway type tests at the first attempt. We are very proud of this fact as it was a completely new design and this is now entering production.

So an expanded Merlyn Electronics Ltd demonstrated an ability to interpret design briefs and deliver a solution on time and to budget which takes full account of the special issues affecting the rail industry.

We would be delighted to discuss your specific requirements and provide a competitive quote for deign, development, prototyping and production. Please do not hesitate to call our sales team.
